CLAIMS

- A method of protecting a solid-state protein from ionizing radiation which comprises combining said protein with a radiation-protecting amount of a methoxysalicylaldehyde derivative prior to exposing said protein to said ionizing radiation.
 - A method according to claim 1 wherein said methoxysalicylaldehyde derivative is 3methoxysalicylaldehyde.

10

5

3. A method of protecting a solid-state protein from ionizing radiation which comprises combining said protein with radiation-protecting amounts of amethoxysalicylaldehyde derivative and 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid prior to exposing said protein to said ionizing radiation.

15

 A method according to claim 3 wherein said methoxysalicylaldehyde derivative is 3methoxysalicylaldehyde.

5. A method of protecting a solid-state protein from ionizingradiation which comprises combining said protein with radiation-protecting amounts of a methoxysalicylaldehyde derivative and isopropanol prior to exposing said protein to said ionizing radiation.

20

A method according to claim 5 wherein said methoxysalicylaldehyde derivative is 3methoxysalicylaldehyde.

25

- A formulation comprising a solid-state protein and a methoxysalicylaldehyde derivative.
- 30
- A formulation according to claim 7 wherein said methoxysalicylaldehyde derivative is 3-methoxysalicylaldehyde.

8. A formulation according to claim 7 wherein said protein is a drug.

5

- 10. A formulation according to claim 7 wherein said methoxysalicylaldehyde derivative comprises at least about 0.1% by weight of said formulation.
- 11. A formulation according to claim 10 wherein said methoxysalicylaldehyde derivative comprises from about 2.9% to about 8.0% by weight of said formulation.
 - 12. A formulation comprising a solid-state protein, a methoxysalicylaldehyde derivative, and 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid.
- 10 13. A formulation according to claim 12 wherein said protein is a drug.
 - 14. A formulation according to claim 12 wherein said methoxysalicylaldehyde derivative is 3-methoxysalicylaldehyde.
- 15 A formulation according to claim 12 wherein said methoxysalicylaldehyde derivative comprises at least about 0.1% by weight of said formulation, and said 6hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid comprises at least about 0.1% by weight of said formulation.
 - 16. A formulation according to claim 15 wherein said methoxysalicylaldehyde derivative comprises from about 2.9% to about 8.0% by weight of said formulation, and said 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid comprises from about 0.1% to about 1.0% by weight of said formulation.
- 25 '17. A formulation comprising a solid-state protein, a methoxysalicylaldehyde derivative, and isopropanol.
 - 18. A formulation according to claim 17 wherein said protein is a drug.
- 30 19. A formulation according to claim 17 wherein said methoxysalicylaldehyde derivative is 3-methoxysalicylaldehyde.

15

- 20. A formulation according to claim 17 wherein said methoxysalicylaldehyde derivative comprises at least about 0.1% by weight of said formulation, and said isopropanol comprises at least about 0.1% of said formulation.
- 5 21. A formulation according to claim 17 wherein said methoxysalicylaldehyde derivative comprises from about 2.9% to about 8.0% by weight of said formulation, and said isopropanol acid comprises from about 0.1% to about 4.0% of said formulation.
- A composition comprising a methoxysalicylaldehyde derivative and 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid.
 - 23. A composition according to claim 22 wherein said methoxysalicylaldehyde derivative is 3-methoxysalicylaldehyde.
 - 24. The use of said composition of claim 22 in pharmaceutical formulations as a radioprotectant.
